

A1SI AITP · Icon Concept Sample Sheet

A1

12 candidate app icons across 4 design families — AITP's first house-family icon set, replacing the loose favicon/apple-touch PNGs.

A1SI house navy #00007B (= CVWS/TERM/WIFI family) · house signal accent cyan #00D4FF · icon art uses the house palette, independent of the (changing) in-app theme

FAMILY A — MARKETS

The price-action story: candlesticks, breakouts, the portfolio curve. Direct and universally legible.

Candlestick Rise A1

The canonical trading mark: four solid OHLC candles stepping up on a glowing axis, the closing candle in house cyan. Instantly says "markets / trading" at any size; lowest recognition risk. The safe primary.

Trend Breakout A2

A glowing cyan arrow punching up through a white resistance bar, candles below. Adds action — "a move is happening," not just "a chart exists." The most energetic mark in the literal family.

Area Surge A3

A filled area / mountain chart climbing to a glowing cyan peak — the equity-curve story. Reads as one bold silhouette, so it survives the smallest sizes better than thin candles.

48 px legibility QA

FAMILY B — PORTFOLIO

The holdings story: allocation, accumulation, protected growth. AITP is wealth, not just charts.

All 12 concepts rasterized to 48 px (Android launcher / iOS Spotlight scale). Reject anything that muddies here — the inner glyphs of C8/C9 are the ones to watch.

Allocation Ring B4

A heavy white donut with one glowing cyan segment and a cyan up-tick at its heart — diversification plus growth. A clean badge that reads at any size without depending on a chart silhouette.

Coin Stack B5

Three stacks of asset coins growing left-to-right, the tallest crowned by a glowing cyan coin and up-arrow. The accumulation / multi-asset story — the most literally "money" mark in the set.

Secure Growth B6

A custody shield with a glowing cyan trend climbing inside — protected capital that compounds. The trust / safekeeping angle, important for a platform that holds and trades real money.

Family B sells **wealth** — a portfolio you own and grow, not just a chart you watch.

FAMILY C — AI SIGNAL

What makes AITP software: ML signals, multi-tier automation, live telemetry. The clearest house-motif tie.

AI Pulse C7

The shared A1SI signal fan rising off the candles — AI-driven signals streamed live to dashboard and bots. The strongest single-glyph tie to the TERM / WIFI / CVWS house motif.

Hex Trade Node C8 ✓ SELECTED

Candles framed in the hexagon badge — the deliberate sibling of TERM / CVWS / WIFI "Hex Node." Pick this for one recognizable A1SI shelf identity, only the inner glyph changing per app.

Neural Trend C9

An ML node network resolving into a glowing up-trend — the FreqAI / VectorBT→Freqtrade→Nautilus→HFT automation story nobody else in the family can tell. Most "AI" of all; watch its legibility at 24 px.

Family C foregrounds **AI + automation** — the differentiator vs. a manual charting app.

FAMILY D — MARK

Monogram and abstract pictograms: most ownable, least literal.

A Monogram D10

A heavyweight "A" (A1SI / AITP) standing on the glowing axis, its apex the peak of the climb. Trademark-friendly and unmistakable at any size; says nothing about trading until you know the brand.

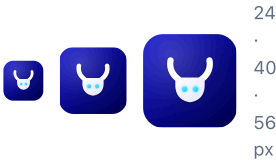

Up Arrow Glyph D11

An abstract upward arrow built from candle segments — a glowing cyan head over a white candlestick shaft. The cleanest 24 px read in the set; a strong favicon / monochrome glyph even if not chosen as the app icon.

Bull Mark D12

An abstract bull — two horns sweeping up off a bold head, glowing cyan eyes. The bull-market mark: ownable and memorable, though it leans optimistic and is the least literal about "platform."

Family D is the **ownable** route — distinct marks that survive any size or colorway.

All 12 concepts

SHEET

Full contact sheet at review scale.

Decision — June 2026

C8 "Hex Trade Node" was selected and shipped. AITP adopts the A1SI hexagon badge so it reads as a visible sibling of CVWS / TERM / WIFI on a home screen, with the rising-candlestick glyph carrying the trading story inside. The full family (web favicons, iOS AppIcon set, Android mipmaps + Play-Store art, and the live PWA set + `site.webmanifest`) is generated by `export_icons.py`; reference copies and the QA sheet live in `./icons/`. The remaining 11 concepts stay here as the design record.

Design & Marketing recommendation (pre-decision)

AITP currently ships only a loose `favicon.png` / `apple-touch-icon.png` and is not part of the house family. Every concept above uses the A1SI house construction — gradient navy squircle + bold solid white glyph + a single glowing cyan accent — shared with A1SI-CVWS, A1SI-TERM and A1SI-WIFI, so AITP joins them as a visible sibling. No green/red: the rising-trend story rides on candle height and the cyan glow.

Primary recommendation: A1 "Candlestick Rise." The universal "this is a markets / trading app" mark — zero re-learning, maximum legibility, and it drops straight into the light/dark/tinted export pipeline. The safe default.

Differentiation pick: C7 "AI Pulse." If the icon should say what makes AITP different — AI-driven, automated, live — the signal fan rising off the candles carries that, and it is the tightest tie to the A1SI house motif.

Family pick: C8 "Hex Trade Node." CVWS shipped a Hex Node and TERM explored one; adopting the hexagon badge here makes the apps visible siblings on a home screen, with only the central glyph changing per product.

Ownable pick: D10 "A Monogram" / D11 "Up Arrow Glyph." The most trademark-friendly routes, and D11 doubles as the cleanest small-size favicon regardless of which app icon wins.

Next step: select 1–2 directions. We then run `export_icons.py` on the chosen SVG to produce the full export set (dashboard favicons, iOS/Android app icons incl. dark + tinted variants, store art), with reference copies landing in `../icons/` before it replaces the shipped favicon.
